What if

Rehearse a decision before you spend money.

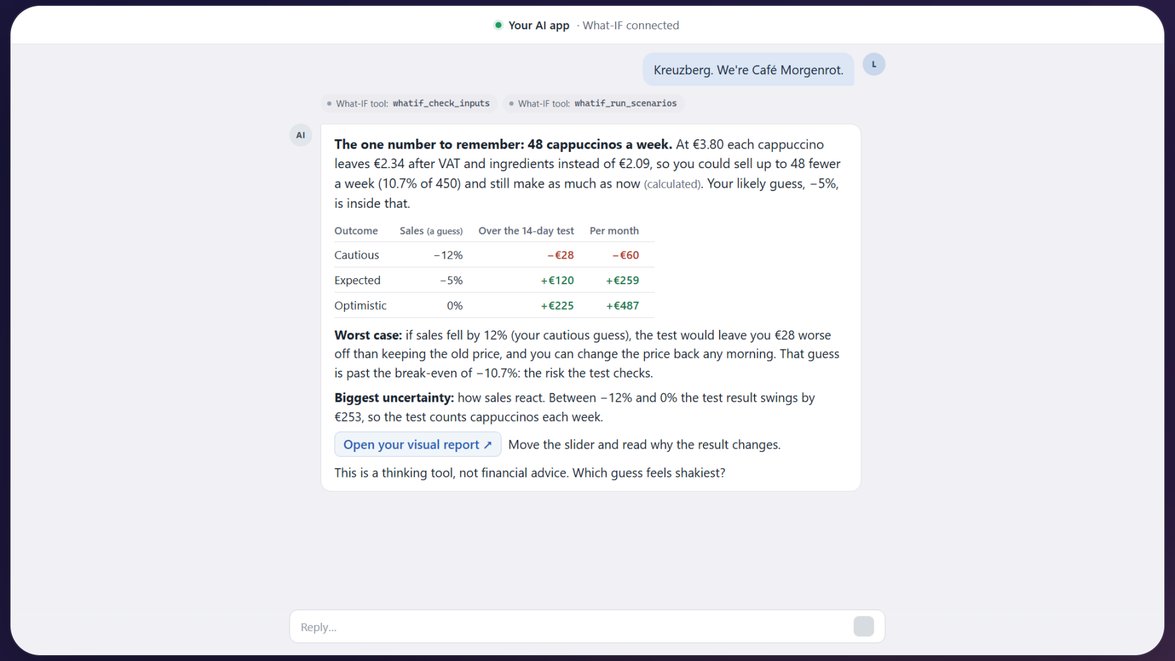

Small businesses decide on gut feeling.

No analyst. No time. And AI that can’t show where its numbers come from.

Just ask: “what if…?”

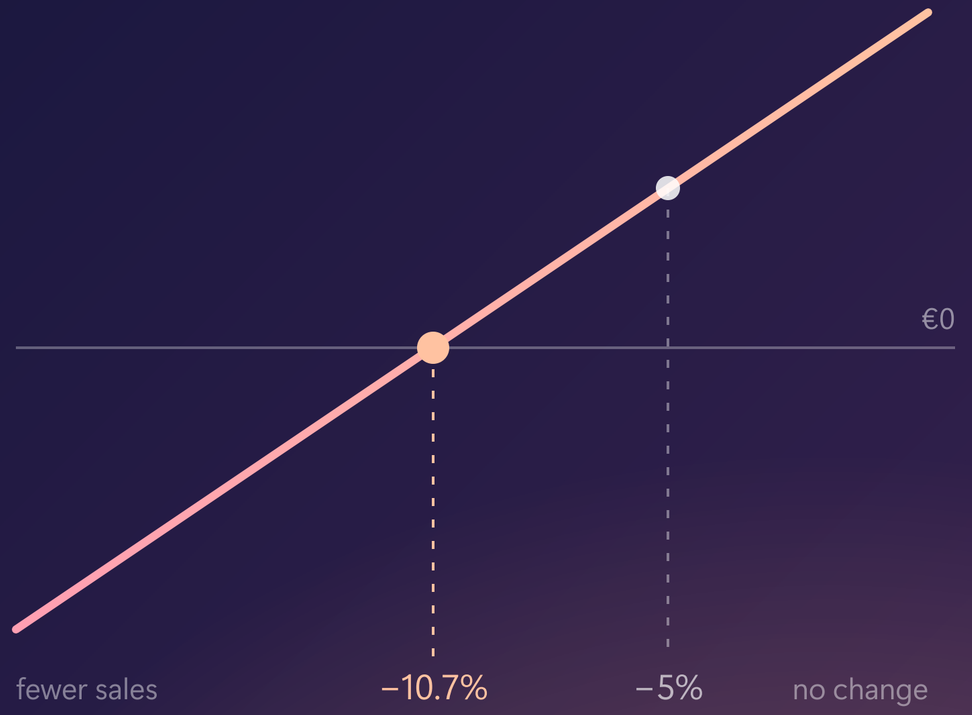

In the AI you already use. Code does the maths; the answer shows where every number came from.

48

fewer cappuccinos a week, and she still earns as much.

€3.50 → €3.80. Her guess: 5% fewer. Worst case over the test: −€28.

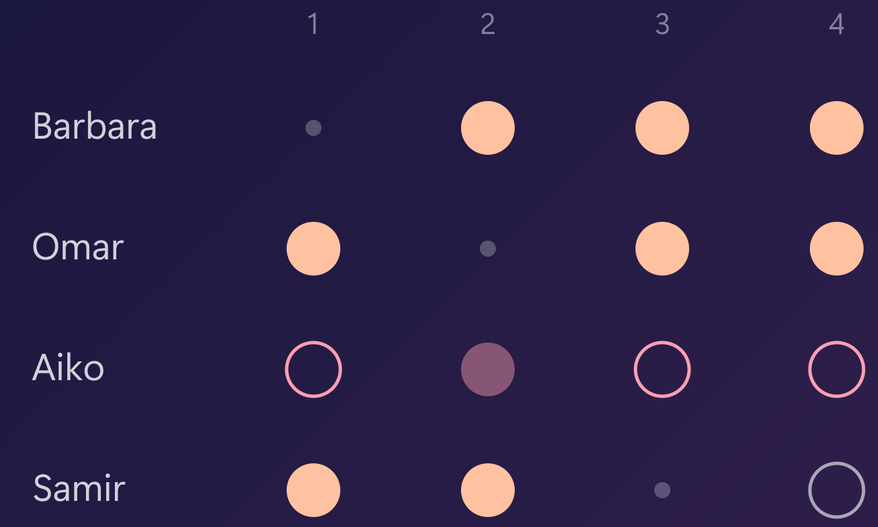

Every number shows where it came from.

Yours | Calculated | A guess | Imagined

Code does the maths. AI explains. That’s the lesson.

Rehearse with imagined customers.

Four imagined regulars, played by AI, react over four rounds. They give you questions, not predictions.

“Thirty cents more for the same cup, and not a word about it.”

Aiko · imagined

Test small. Then decide.

Keep · Tweak · Stop

Two weeks. Count the cups. Keep at 402 a week or more, stop below 378, agreed before you start.

What if

Possibilities, not promises.
